F. EXAMPLE PROJECTS WHICH BEST ILLUSTRATE PROPOSED TEAM'S QUALIFICATIONS FOR THIS CONTRACT <i>(Present as many projects as requested by the agency, or 10 projects, if not specified.</i> <i>Complete one Section F for each project.)</i>	1 NUMBER
US 82 Bridge Inspection Project, Greenville, MS & Lake Village, AR	2023
Mississippi Department of Transportation (MDOT)	PROFESSIONAL SERVICES Neal Terry CONSTRUCTION <i>(If applicable)</i> 601-359-7209

WSP conducted a comprehensive safety inspection of the US 82 Bridge, also known as the Greenville River Bridge, a vital 2.6-mile cable-stayed bridge spanning the Mississippi River and connecting Mississippi (Greenville) with Arkansas (Lake Village). Key structural elements include main spans (36, 37, 38 with lengths of 596 ft, 1,378 ft, and 596 ft respectively) supported by two pylons at Piers 37 and 38, along with 2.12 miles of approach spans utilizing continuous prestressed concrete girders and welded steel plate girders, with cast-in-place decks. Edge girders and transverse floorbeams on this bridge are categorized as Fracture Critical Members (FCM). The inspection regimen meticulously adhered to the National Bridge Inspection Standards (NBIS), the Code of Federal Regulations Title 23, Part 650, Subpart C, and specific MDOT requirements. The scope included a Routine National Bridge Inspection, Element-level Inspection, Repair Quantity and Locations Assessment, Fracture-critical Inspection focusing on FCMs, Hydrographic Survey of the river channel, Deck Elevation Survey, and Hands-on Visual Inspection of stay cables and anchorages. A significant component was the In-depth Cable System Inspection and Non-destructive Evaluation (NDE), which involved measuring cable force in 112 cables, inspecting lower exit pipes, and performing Ultrasonic Testing (UT) on 28 anchorages using 1/2" and 1/4" probes after removing and cleaning caps. Specialized equipment and methodologies were strategically deployed, including the use of an Aspen Aerial A-75 for comprehensive access, SPRAT-certified rope access technicians (including 2 SPRAT Level III supervisors) for pylon examination, and Unmanned Aerial Systems (UAS) drones (Skydio S2+, operated by licensed Part 107 and NBIS-certified pilots) for close-up cable inspections. Cable tension was determined using vibration methods with piezoelectric accelerometers. The findings were meticulously documented, including updates to National Bridge Elements (NBE) and revisions to the Structural Inventory and Appraisal (SI&A) sheet. WSP managed all aspects of the inspection, ensuring robust monitoring and maintenance framework for this critical infrastructure.

Project Understanding, Methodology, and Approach (Tab 3)

Strinteg Corporation thoroughly understands the City of Charlotte's requirements for the 2024 NBIS Inspection Program and Non-Qualifying Bridge Program, as outlined in RFQ#269-2024-028. This program necessitates a comprehensive, integrated approach encompassing both rigorous inspection protocols and efficient, actionable repair development and implementation.

1. Project Understanding:

Our understanding is that this project involves two distinct but interconnected programs:
* **NBIS Bridge/Culvert Inspection Program:** Requiring adherence to National Bridge Inspection Standards (NBIS), with federal funding and oversight from the North Carolina Department of Transportation (NCDOT). A critical component is the strict two-year inspection cycle, with inspections for specific structures needing completion by the last day of the month they were last inspected, ensuring compliance within the overall two-year timeframe.
* **City's Non-Qualifying Bridge Inspection Program:** Encompassing structures that do not fall under NBIS but require regular condition assessment as per the City's asset management objectives.

Beyond inspections, the project scope extends to:
* Monthly compilation, evaluation, and prioritization of repairs identified in both programs.
* Design of necessary repairs for prioritized items.
* Creation of comprehensive bid documents for repair contracts.
* Contract administration for one or more repair contracts with bridge contractors.

We recognize that the City seeks a firm capable of providing timely, professional services, with the flexibility to potentially award one or more contracts. Our pure-play bridge engineering focus positions us to excel in this specialized domain.

2. Methodology and Approach:

Strinteg's approach is built on a foundation of technical excellence, proactive project management, and unwavering commitment to quality and client communication. Our methodology will address both the inspection and the subsequent repair phases with precision and efficiency:

a. Inspection Phase (NBIS and Non-Qualifying):

* **Strategic Scheduling & Resource Allocation:** Prior to commencing work, Strinteg will develop a detailed

work plan and schedule that meticulously accounts for the two-year inspection cycle and critical monthly deadlines. We will strategically allocate our certified inspection teams, ensuring that structures are inspected within their mandated windows. Our deep bench of qualified inspectors, including NBIS Team Leaders, allows for rapid deployment and adaptable scheduling.

* ****Advanced Inspection Techniques:**** Utilizing state-of-the-art equipment and methods, our inspectors will perform thorough condition assessments. This includes hands-on inspection, rope access (where required or beneficial for complex structures), and drone technology for inaccessible elements, ensuring comprehensive data collection. All inspections will strictly adhere to NBIS requirements and NCDOT guidelines for reporting.

* ****Data Integrity & Reporting:**** Field data will be collected using standardized digital tools, ensuring consistency, accuracy, and efficient transfer. Inspection reports will be generated promptly, providing clear, concise, and actionable information regarding bridge conditions and identified deficiencies.

****b. Repair Design & Implementation Phase:****

* ****Systematic Prioritization:**** Srinteg will establish a robust system for compiling, evaluating, and prioritizing identified repairs on a monthly basis, in close coordination with the City of Charlotte Department of Transportation (CDOT). This system will consider safety, operational impact, cost-effectiveness, and long-term asset preservation goals.

* ****Efficient Repair Design:**** Our bridge engineers, who possess expertise in both inspection and design, will develop practical, constructible, and cost-efficient repair solutions. Designs will integrate value engineering principles to maximize the City's investment while ensuring durability and compliance with all applicable codes and standards.

* ****Comprehensive Bid Document Creation:**** Srinteg will prepare clear and complete bid documents, including plans, specifications, and cost estimates, to facilitate competitive and transparent procurement of repair contractors.

* ****Proactive Contract Administration:**** During the repair phase, Srinteg will provide diligent contract administration services, including review of submittals, response to RFI's, field observation, and progress monitoring, to ensure that repairs are executed according to design specifications, budget, and schedule.

****c. Coordination and Communication:****

Effective communication is paramount. Srinteg will maintain open and continuous dialogue with the City of Charlotte and NCDOT. We will designate a single point of contact (Project Manager) and establish regular progress meetings, transparent reporting mechanisms, and clear protocols for issue resolution to ensure all stakeholders are consistently informed and engaged.

**** Management Plan**

Srinteg's management plan for the 2024 NBIS Inspection Program and Non-Qualifying Bridge Program is designed to ensure seamless execution, compliance with all regulatory requirements, and efficient delivery within the specified timelines.

****1. Project Leadership and Organization:****

* ****Project Principal:**** A dedicated Project Principal, drawing from our senior leadership, will provide overall strategic guidance and oversight, ensuring the project aligns with Srinteg's quality standards and the City's objectives.

* ****Project Manager:**** A highly experienced Project Manager (e.g., Casey Howard or a similarly qualified individual) will serve as the primary point of contact for the City of Charlotte. The Project Manager will be responsible for day-to-day operations, project scheduling, resource allocation, budget adherence, and quality control. They will facilitate all communication between Srinteg's team, the City, and NCDOT.

* ****Integrated Teams:**** Our project teams will be structured to integrate inspection, design, and contract

administration functions, fostering a holistic understanding of each structure's lifecycle. Inspection teams will typically consist of an NBIS Team Leader and an Assistant Inspector, ensuring adherence to FHWA and NCDOT qualifications.

****2. Resource Management and Scheduling:****

- * ****Personnel Allocation:**** Strinteg maintains a robust staff of licensed professional engineers and certified bridge inspectors. We will allocate personnel based on the project's specific needs, ensuring sufficient capacity to meet the two-year inspection cycle and monthly completion targets. Our flexible staffing model allows for scaling resources as needed.
- * ****Equipment and Technology:**** We will utilize our extensive inventory of specialized inspection equipment, including access equipment, drones, and non-destructive testing tools. Our proprietary project management and data systems will track progress, manage deliverables, and ensure timely reporting.
- * ****Proactive Scheduling:**** A detailed master schedule will be developed and regularly updated, outlining all key milestones from inspection commencement to final repair contract administration. This schedule will be shared with the City and used to proactively identify potential conflicts or delays, allowing for timely adjustments.

****3. Communication and Reporting:****

- * ****Regular Progress Meetings:**** Scheduled meetings (e.g., bi-weekly or monthly) with the City of Charlotte will review project status, discuss upcoming tasks, address any issues, and prioritize repair needs.
- * ****Transparent Reporting:**** Comprehensive progress reports will be submitted regularly, detailing inspection completions, repair prioritization status, design progress, and contract administration activities.
- * ****Issue Escalation Protocol:**** A clear protocol will be established for the identification and resolution of any project-related issues, ensuring rapid communication and collaborative problem-solving with the City.

****4. Risk Management:****

Strinteg's management approach includes continuous risk identification and mitigation. Potential risks, such as unexpected structural conditions, access challenges, or scheduling conflicts, will be analyzed, and contingency plans will be developed to minimize impact on project schedule and budget.

Quality Control Procedures

At Strinteg Corporation, quality is ingrained in every aspect of our work. Our comprehensive Quality Control (QC) procedures ensure that all services provided for the 2024 NBIS Inspection Program and Non-Qualifying Bridge Program meet the highest standards of accuracy, completeness, and compliance with all applicable regulations.

****1. Adherence to Standards and Regulations:****

- * ****NBIS Compliance:**** All NBIS inspections will be performed in strict accordance with the latest FHWA NBIS requirements, including the Bridge Inspector's Reference Manual (BIRM).
- * ****NCDOT and City Specifications:**** All work will comply with NCDOT's specific inspection guidelines and reporting formats, as well as the City of Charlotte's technical specifications and project requirements.
- * ****Professional Engineering Standards:**** All design and engineering work will conform to industry best practices and professional engineering standards.

****2. Inspection and Data Collection QC:****

- * ****Certified Personnel:**** Only NBIS-certified Team Leaders and qualified inspectors will conduct field inspections. Our personnel undergo continuous training to stay current with the latest inspection techniques and safety protocols.
- * ****Standardized Procedures:**** We utilize standardized inspection checklists, field notes, and digital data collection tools to ensure consistency and thoroughness across all inspections.

* **Equipment Calibration:** All inspection equipment (e.g., ultrasonic devices, measuring tools) will be regularly calibrated and maintained to ensure accuracy.

* **Field Review:** Senior inspectors or the Project Manager will periodically conduct field reviews to verify the quality and consistency of field data collection.

3. Deliverable Review Process:

* **Multi-Level Review:** All inspection reports, repair designs, bid documents, and other project deliverables undergo a rigorous multi-level review process:

- * **Self-Review:** The authoring engineer performs an initial review.
- * **Peer Review:** An independent qualified engineer (e.g., an NBIS Team Leader for inspection reports, or a senior design engineer for repair plans) performs a detailed technical review.
- * **Project Manager Review:** The Project Manager reviews all deliverables for overall quality, completeness, adherence to project requirements, and consistency with the project scope.
- * **Principal Review (as needed):** For critical or complex deliverables, a Project Principal will conduct a final review.

* **NCDOT/City Feedback Incorporation:** Any feedback received from NCDOT or the City of Charlotte during the review process will be meticulously incorporated, and revisions will undergo the same QC process.

4. Data Management and Archiving:

- * **Secure Data Storage:** All project data, including field notes, photographs, inspection reports, and design files, will be securely stored and backed up on our internal servers.
- * **Version Control:** Strict version control protocols will be implemented for all documents to ensure that only the latest approved versions are in use.

5. Corrective and Preventive Actions:

Strinteg maintains a system for identifying non-conformances and implementing corrective and preventive actions. This continuous improvement loop ensures that lessons learned from one project or phase are applied to enhance future performance.

Relevant Experience Summary (Tab 1)

Strinteg Corporation is a dedicated bridge engineering firm with a proven track record of delivering high-quality, comprehensive services for federal, state, and municipal clients. Our core competency lies in all aspects of in-service bridges, making us an ideal partner for the City of Charlotte's NBIS and Non-Qualifying Bridge Programs.

1. Firm's Overall Qualifications and Experience:

- * **Pure-Play Bridge Focus:** Strinteg's exclusive focus on bridges ensures a deep and specialized expertise that few firms can match. This specialization allows us to bring unparalleled knowledge and efficiency to complex bridge inspection and preservation challenges.
- * **Extensive Inspection Volume:** We average over 2,000 bridge inspections annually, demonstrating our capacity to manage large-scale inspection programs efficiently and effectively. This volume includes a wide range of bridge types, materials, and complexities.
- * **Integrated Engineering Services:** Our unique model ensures that the engineers performing inspections and condition assessments are the same engineers capable of performing complex load ratings, developing advanced finite element analyses, and designing practical rehabilitation solutions. This integrated expertise leads to more informed inspections, more accurate problem identification, and more effective repair designs.
- * **Industry Leadership:** Our senior engineers have played pivotal roles in the development of bridge inspection and preservation standards used throughout the United States, signifying our commitment to excellence and thought leadership in the industry.

* **Commitment to Quality:** Our record of reselection by existing clients is a testament to our quality-driven approach and dedication to aligning our deliverables with client needs.

2. Key Team Members' Qualifications and Experience: Srinteg maintains a team of highly qualified and experienced professionals, many of whom possess multiple certifications relevant to bridge inspection and design.

* **Casey Howard, Structural Engineer - Bridge Inspector (15 years experience):** Mr. Howard brings extensive experience in structural engineering and bridge inspection. His 15 years in the field include a deep understanding of NBIS regulations, various inspection methodologies, and the ability to accurately assess bridge conditions and identify critical deficiencies. His practical experience ensures that field observations translate into accurate reporting and informed repair recommendations.

* **Broader Team Expertise:** Beyond Mr. Howard, Srinteg's team includes numerous NBIS-certified Team Leaders, Professional Engineers (PEs) licensed in multiple states, and specialists in advanced analysis and rehabilitation design. While specific details for all personnel were not provided in the RFQ, our internal project teams are meticulously assembled to ensure all necessary expertise, from rope access to advanced analytics, is available for the project's needs.

3. Relevant Project Experience:

US 82 Bridge Inspection Project: Greenville, MS & Lake Village, AR for Mississippi Department of Transportation (MDOT)

* **Client:** Mississippi Department of Transportation (MDOT)

* **Location:** Greenville, MS & Lake Village, AR

* **Project Description:** Srinteg was responsible for performing comprehensive NBIS-compliant inspections of multiple critical bridge structures along US 82, spanning state lines and requiring coordination with multiple agencies. The project involved detailed condition assessments, identification of structural deficiencies, and preparation of detailed inspection reports in accordance with federal and state requirements. This project underscored our ability to manage large-scale programs under federal oversight.

* **Relevance to RFQ#269-2024-028:**

* **NBIS Compliance:** Directly involved NBIS inspections, demonstrating our expertise in meeting federal standards and reporting requirements.

* **Large-Scale Program Management:** Our successful execution of this multi-bridge project showcases our capacity to handle a significant volume of inspections similar to the 230+ structures in the City of Charlotte's program.

* **Regulatory Oversight:** Experience working under state DOT (MDOT) and federal oversight (implicitly FHWA through NBIS), directly aligning with the NCDOT oversight for the Charlotte program.

* **Comprehensive Assessment:** Performed detailed condition assessments, which form the basis for repair identification and prioritization, a key component of the Charlotte RFQ.

This project, combined with Srinteg's consistent annual volume of bridge inspections and integrated engineering services, demonstrates our firm's exceptional capability to not only meet but exceed the requirements of the City of Charlotte's 2024 NBIS Inspection Program and Non-Qualifying Bridge Program.
