Contract	Client	References	Contract Value	Description of Work Performed
88-1IDP5001 Statewide NSTM & Tunnel Inspections	TxDOT	Primary Contact Justin Wilson, PE 512-348-5747 justin.wilson2@txdot.gov Alternate Contact Mark Wallace, PE mark.wallace@txdot.gov	\$12,000,000	Inspection of over 1,350 NSTMs (truss and two-girder spans, plate and box caps, steel tub girders, and railroad flatcars) found within over 500 bridges throughout the State. Inspections included hands-on access to all NSTMs and complex bridge elements, often requiring the use of aerial lift equipment, technical climbing techniques, and rope access. In addition to inspection, a thorough review of existing load ratings was completed with isolated load ratings modified due to as-inspected conditions.
88-4IDP5100 Statewide NSTM & Tunnel Inspections	TxDOT	Primary Contact Justin Wilson, PE 512-348-5747 justin.wilson2@txdot.gov Alternate Contact Mark Wallace, PE mark.wallace@txdot.gov	\$12,000,000	As a reselection of 88-1IDP5001, assignments to date have included the inspection of over 200 NSTMs on structures throughout the State. Inspections include hands-on access to all NSTMs and complex bridge elements, often requiring the use of aerial lift equipment, technical climbing techniques, and rope access. In addition to inspection, a thorough review of existing load ratings is completed with isolated load ratings modified due to as-inspected conditions.
88-9IDP5006 Statewide Routine Bridge Inspections	TxDOT	Primary Contact Mark Wallace, PE 512-673-2984 mark.wallace@txdot.gov Alternate Contact Steven Austin, PE 737-701-4020 steven.austin@txdot.gov	\$7,500,000	Routine inspection of thousands of structures throughout the State, including culverts, prestressed concrete girders, pan girders, timber elements, trusses, two-girder systems, slabs, concrete arches, high-level complex steel, cable-supported, and concrete continuous girder bridges. Each inspection required review of existing load ratings, regeneration of load ratings based upon SHV and EV truck configurations, and to account for as-inspected conditions. Srinteg received a \$300,000 work authorization to review load ratings performed by the other 19 consultants, utilize advanced analysis techniques to eliminate the need to post bridges, and perform complex load ratings for curved girder bridges.
88-2IDP5044 Statewide Routine Bridge Inspections	TxDOT	Primary Contact Mark Wallace, PE 512-673-2984 mark.wallace@txdot.gov Alternate Contact Steven Austin, PE 737-701-4020 steven.austin@txdot.gov	\$9,000,000	As a reselection of 88-9IDP5006, the contract included the routine inspection of thousands of structures throughout the State, including culverts, prestressed concrete girders, pan girders, timber elements, trusses, two-girder systems, slabs, concrete arches, high-level complex steel, cable-supported, and concrete continuous girder bridges. Each inspection required review of existing load ratings, regeneration of load ratings based upon SHV and EV truck configurations, and to account for as-inspected conditions. Srinteg received two unique work authorizations totalling \$700,000 to perform complex load ratings for curved girder bridges (I-beam and tub girder), long-span trusses (Rainbow Bridge), staggered-support bridges (IH-345 viaduct in Dallas, TX), and unique delta-frame structures (Houston Ship Channel Bridge).
